

Supermarket Sales Optimization: A Data-Driven Strategy

Analyzing Unit Economics & Customer Behavior to Maximize Profitability

Ripan Nurpaujan | Data Analyst

Executive Summary: Key Insights

Margin vs. Volume Disparity

Fashion items yield high profits, while electronics offer thinner margins, emphasizing a need for diversified strategies.

Peak Operational Hours

Our stores experience consistent traffic peaks around 7 PM, indicating critical periods for staffing optimization.

Ineffective Loyalty Program

Member and normal spending habits show no significant difference, suggesting the current loyalty program needs re-evaluation.

Data Overview & Methodology

Our analysis leverages a robust dataset and advanced analytical techniques to uncover actionable insights.

Analyzed three months of comprehensive sales transactions to identify trends and patterns.

Utilized Pandas for data cleaning and manipulation, and Seaborn for compelling data visualizations.

Employed Exploratory Data Analysis (EDA), Unit Economics Analysis, and Customer Segmentation.

Who & When? Operational Efficiency

Understanding customer traffic patterns is crucial for optimizing store operations and resource allocation.

Weekly Sales Pattern

- ❏ Traffic consistently peaks at 7 PM. Recommend dynamic shifting for cashiers and floor staff to avoid bottlenecks and enhance customer experience during these busy hours.

Daily sales volume remains remarkably stable (low variance). This stability simplifies workforce planning, as no extreme fluctuations occur between weekdays and weekends.

Product Strategy: Deep Dive into Profitability

Understanding the unit economics of different product categories is key to maximizing overall profitability.

Gross Profit per Unit

Fashion

High Gross Profit

Electronics

Low Gross Profit

❏ Electronics rely heavily on volume. A strategic approach involves bundling low-margin electronics with high-margin fashion items to boost average transaction value and profit.

Customer Segmentation: Membership Program Evaluation

Our analysis reveals insights into customer spending habits, vital for refining loyalty initiatives.

- ❏ The Boxplot reveals that both Members and Normal customers share the same **Median Spending** (center line) and distribution range.

There is no statistical evidence that holding a 'Member' status leads to larger transaction sizes.

The current membership program is **ineffective** at driving higher revenue per transaction.

Final Recommendations: Action Plan for Growth

Implement these concrete solutions to drive sales, optimize operations, and enhance customer membership.

Bundling Strategy

Introduce "Lifestyle Tech" packages that combine low-margin electronics with high-margin fashion accessories.

Operational Staffing Boost

Increase cashier and floor staff presence between 6:00 PM and 8:00 PM to manage peak traffic efficiently.

Revamp Membership Program

Implement a tiered points-based system that rewards customers for every purchase, offering exclusive discounts and early access to sales.

Why Data Matters

Data-driven decisions transform challenges into opportunities, fostering continuous improvement and sustainable growth.

Increased Revenue
Identifies profit centers and upsell opportunities.

Fosters Innovation
Drives new strategies and product development.

Optimized Operations

Streamlines processes and resource allocation.

Enhanced Customer Experience

Tailors offerings to meet customer needs.

Informed Decision Making

Provides clear, actionable insights.

Future Opportunities

Beyond the current analysis, several avenues exist for further data exploration and optimization.

Predictive Inventory Management

Utilize sales forecasts to optimize stock levels and reduce waste.

Dynamic Pricing Models

Implement flexible pricing based on demand, seasonality, and competitor data.

Personalized Marketing

Leverage customer segmentation for targeted promotions and communications.

Supply Chain Optimization

Analyze logistics data to improve efficiency and reduce costs from suppliers to shelves.

Thank You

Open to discussing how data can optimize engineering & business processes.
